The **home feature** is basically a feature to define the link home. This will set two variables inside the template depending on the locale: `{{home_text}}` and `{{home_url}}`.

[Themes](#) are encouraged to use this over `href="{{cfg.site.url}}"` and `{{cfg.site.title}}` as this will only link back to the default language/ locale. It is strongly recommended to use this feature, also because [Pankyll](#) is using it to calculate a template `{{title}}` value. (See feature [title](#))

```
home:
  en_US:
    text: Pankyll Themes # home_text
    url: en_US           # home_url
  de_DE:
    text: Pankyll Layouts
    url: de_DE
  ja_JP:
    text: パンキュル セーム
    url: ja_JP
```
