## Contents

<b>1 Pankyll Theme Rankle</b>	<b>1</b>
1.1 Left Site	1
1.2 Right Site	2

The **Top 10** feature is provided by [pankyl](#) and supported by the theme [Rankle](#). It provides a link list to the 10 latest pages.

## 1 Pankyll Theme Rankle

To use the feature it has to be enabled via the project configuration. Depending on your setup this can be `cfg.yaml` or `rankle.yaml` via the `feature` section:

```
1 feature:
2   top10: True
```

The **top 10** feature can be used on the left or right side of a page.

### 1.1 Left Site

{{% pageinfo %}}

At the moment the left side **top 10** feature is only available for title pages. To set a page as title page use the front matter `type: title`.

{{% /pageinfo %}}

To use the **top 10** feature on the left page side (indented for `index.md` pages for example), you have to enable the feature in the project configuration:

```
1 feature:
2   top10: True
```

In addition to this you can use the left side in two ways:

a)

Use the left side only for a very limited number of pages, like `index.md` pages. To enable **top 10** for a page explicitly add the following front matter:

```
1 top10: True
```

b)

To use the left side **top 10** feature on all sides add the following to your project configuration:

```
1 feature:
2   top10: True
3 default:
4   top10_left: True
```

## 1.2 Right Site

To use the **top 10** feature on the right side of the page, you have to enable right side variant in the default project configuration:

```
1 feature:
2   top10: True
3 default:
4   top10_right: True
```

This will add a menu entry “Latest” with the list when clicked on it on all pages.
