The usage of the localization (l10n) feature is mandatory, even if you use just one language (as opposed to none), as many other parts and features of [Pankyll](#) depend on at least one language. Which language is up to you. It could be 'en_US' or 'de_DE' or what ever language you prefer. A minimal configuration snippet for `cfg.yaml` looks like this.

```
# 2. Feature: Internationalization
#   at minimum you have to define 1 language (the default)
locales:
  en_US: English
```

A configuration for two languages looks like this.

```
locales:
  en_US: English
  de_DE: Deutsch
```
