Contents

The **title** feature is provided by Pankyll in accordance to the configuration in `cfg.yaml`. The feature provides the variable `title` to be used in templates like `{{title}}`. The title value is calculated as follows:

1. If `title` is set in the front matter use this as title.
2. If `home.$LOCALE.text` is defined via the home feature in `cfg.yaml` for the locale of the page, use it as a title.
3. Use `site.title` from `cfg.yaml` as a fallback.

1   Example Page Title In Front Matter

```
title: Pankyll
```

2   Example Home Title

```
# 4. Feature: Home
home:
    en_US:
        text: Pankyll  # home_text
        url:  en_US     # home_url
    de_DE:
```

```
        text: Pankyll
        url:  de_DE
```

3   Example Site Fallback Title

```
site:
    title: Pankyll
```
